Catrinity 2.16 – Private Use Area Characters

The codepoints in the Private Use Area(s) are reserved for own characters of individual fonts. They have generic names and default properties in Unicode.

The character names used in this document are own inventions and not standardised in any way. In Unicode, they are labelled as “private-use-” followed by the codepoint of each character, e.g. “private-use-E000”. Accordingly, the blocks and their names are also self-invented. These names always start with “Private Use Area:” to make sure that they can never collide with a real Unicode block.

The assignments are mostly stable, but characters may occasionally be removed from the Private Use Area if they are defined in an official Unicode block. In this case they are marked with ⛔ in this document, with a reference to the new codepoint.

Catrinity attempts to be as compatible as possible to the Under-ConScript Unicode Registry (UCSUR), Nishiki-Teki (), Fairfax () and Quivira (Q). Unfortunately, this is not always possible as these sometimes use the same codepoints for different characters. In doubt, the Nishiki-Teki assignments are preferred over Quivira’s, as Nishiki-Teki has more private use characters and better compatibility with other fonts and pseudo-standards than Quivira. For every character in Catrinity which is found at a different codepoint in Nishiki-Teki, Fairfax or Quivira, a reference to the other font’s codepoint is given in this document.

These are mostly legacy encodings for the dotless variants of all forms of i and j. The preferred way to access these glyphs is using the standard characters with the OpenType Feature 'dtls' (Dotless Variants).

The block is taken from Quivira where it occupies the range F000 – F03F, but has been relocated to avoid colliding with MUFI-CYFI-SIL Compatibility from Nishiki-Teki. Some of Quivira's characters from this block are found in different blocks in Catrinity, aligned with their corresponding codepoints in Nishiki-Teki.

Combining Subscripts

Each Combining Subscript digit fits exactly under a superscript digit (including ^{i} and ^{n}). The Combining Subscripts may be used for chemical symbols, e.g. ${}^{1}_{1}\mathrm{H}$ or ${}^{238}_{92}\mathrm{U}$, or for mathematical purposes. If you can achieve this by using markup, then markup is the preferred way.

Partially Enclosed Alphanumerics

One left half and one right half form a circled number together. They can be extended to any higher number than ⑲ by using the middle parts. For other enclosed alphanumerics see the “Enclosed Alphanumerics”, “Dingbats”, “Enclosed CJK Letters and Months”, “Enclosed Alphanumeric Supplement”, “Supplementary Private Use Area-A: Enclosed Alphanumerics Appendix” and “Supplementary Private Use Area-A: Partially Enclosed Alphanumerics” Blocks.

Supplementary Private Use Area-A: Playing Cards Appendix

This block is mainly used for German, Swiss and Latin playing cards, and for color variations of French cards. Arguably these are merely variations of the standardized symbols in the Playing Cards block, so you should only use them if the game you are describing requires the distinction, and prefer the standardized ones otherwise.

Truely different playing cards like Hanafuda or Kabufuda are provided in their own blocks.

Supplementary Private Use Area-A: Chess Symbols Appendix

These characters represent pieces used in variants of chess, namely Xiangqi (Chinese chess), Janggi (Korean chess), Shatranj, Tamerlane Chess and Japanese Shogi. All characters are western-styled to match those in the Miscellanous Symbols and Chess Symbols blocks, although variants using ideographs are more common in East Asia (and encoded in the Chess Symbols block). See http://www.chessvariants.com for details.

Supplementary Private Use Area-A: Safety Symbols

The characters in this block are pictograms from several standards for safety signage. For information about how to use them please refer to the corresponding standard, especially in cases where the labelling is legally required. There is no warranty that the symbols in Catrinity are complete (they are not) and actually adhere to the standards. They are intended to be used for informational texts rather than for actual labels and signs.

Some of them can also be expressed by combinations of other characters, both standard and private use ones. In these cases the alternate representations are given below.

Supplementary Private Use Area-A: Regional Flags

Most of the characters in this block are compatibility mappings for flags that are encoded as a combination of two regional indicator characters in Unicode. Please use the standardized mappings wherever possible, and only fall back to these private use mappings if your rendering program doesn't combine the standardized ones correctly.

Supplementary Private Use Area-B: Custom Emoji

To create custom emoji, start with a base character, and then add as many components as you want. The order of the components affects the visibility, as later components are drawn over earlier ones. In addition to the base shapes provided in this block, you can start with any predefined face emoji, zodiac symbol, clock, earth, moon, religion symbol or any of the flags from Catrinity Flags.

Supplementary Private Use Area-B: Arabic Presentation Forms Appendix

The characters in this block are shape variants of Arabic letters, just like the ones in Arabic Presentation Forms-A and -B. They may be useful under certain circumstances, but are not recommended for use with actual Arabic text. Also note that all programs will treat these as Private Use symbols, not Arabic letters, which means that the default writing direction is left to right, and attaching Arabic diacritical marks to them may not work everywhere.

Supplementary Private Use Area-B: Glyph Variants

The characters in this block are glyph variants of existing characters. All of them are deprecated as the preferred way to access them is to use the Unicode codepoints together with the 'aalt' feature. If this is not accessible, the next best option is to use the Private Use Variation Selectors.

Supplementary Private Use Area-B: Mirrored Glyphs

Most of the characters in this block are mirrored forms of mathematical symbols which are not already encoded elsewhere. The original characters are supposed to be mirrored automatically using the 'rtlm' feature in right-to-left contexts, so you should not need these private use characters for this purpose. Note that they are also affected by 'rtlm' and turned back into the original characters in right-to-left contexts, so only use them if you deliberately want a “backwards” version of the character in question, in either left-to-right or right-to-left contexts.

Supplementary Private Use Area-B: Glyph Components

The characters in this block, mostly smaller variants of Latin letters and digits, are used in composite glyphs such as Enclosed Alphanumerics, keycaps or Control Pictures. They are mapped here because they already exist anyway, and maybe they come in handy for creating custom composites or something like this. They are not meant to be used for actual text (just use a smaller font size instead), and compatibility with other fonts is not expected.

Small Variants

These characters match the small capitals and the Small Form Variants.

Color Glyph Components

These glyphs are used as the layers of colored glyphs. They are mapped here for compatibility with environments where the colored glyphs are shown as their outlined fallbacks, but it is possible to overlay several characters, e.g. in some LaTeX variants. If you use them, make sure to place the fillings first, then the shadows, and the outlines on top.
